Array Networks Builds Fastest-Growing Application Delivery Controller Presence in India

Attracts India's top customers with scalability, security, performance and unbeatable value

MILPITAS, CA – September 28, 2010 – [Array Networks Inc.](#), a global leader in secure [application delivery](#), is now the fastest-growing ADC vendor in India. The company's high growth period is a result of providing the best value in application access and delivery to multiple top-tier customers throughout India. India's emerging IT market further validates Array's continued dedication to delivering best-in-class products, adding to the company's global successes over the past decade.

Some of India's largest companies and organizations rely on Array, including:

- 4 out of the Top 5 Companies
- 3 out of the Top 10 Banks
- 3 out of the Top 5 Government PSUs
- 3 out of the Top 10 Wireless Telecom Service Providers.

The significance of customers who have deployed Array in India underscores the company's unmatched value proposition in the region, based on solid product lines, innovative technology and outstanding support. The company's solutions offer scalable, secure access and delivery for key critical enterprise applications, and network infrastructure deployed in India today. Array's secure application delivery controllers and universal access controllers are deployed in a wide range of industries, including large enterprise, banking, government, telecommunications, software, education and many others.

"From our first deployment in India two years ago, Array has steadily and consistently delivered the best secure application delivery products, along with outstanding support", said Michael Zhao, president and CEO of Array Networks. "Being the fastest-growing ADC vendor in the country validates our efforts to help customers grow their businesses in the most cost-effective, scalable and secure manner possible. We are excited to be a part of India's rapid adoption of IT, and are committed to delivering top-notch innovative technology solutions to meet evolving demands in the Indian marketplace."

Array's successes thus far in India have resulted from the company's relentless drive to deliver innovative solutions at a compelling value. Array has proactively invested in India, with direct resources in five metros and RMA available in more than nine cities throughout the country. The APV series application delivery controller provides integrated load balancing, security and acceleration capabilities in the data center. DesktopDirect enables IT

departments to quickly implement business continuity and productivity solutions for remote users. Both solutions allow customers to solve complex IT problems while maintaining a high degree of security, resulting in significant savings in both capital and operational expenses.

“We selected Array for our Application Delivery infrastructure because they offered the best value with a mature feature set, solid performance and high security. We have been very pleased with the world class customer support and professional services delivered by their team,” said Prakash Hegde, manager (IT) at Larsen & Toubro.
