Array Networks' Application Delivery Solutions Now Available Through Promark Technology, an Ingram Micro Company

Alliance with Promark Technology Enables Array to Expand Reach and Address Market Demand for Load Balancing, SSL VPN and WAN Optimization in Private and Public Cloud Infrastructures

Milpitas, CA – October 6, 2015 – Array Networks Inc. (www.arraynetworks.com), a global leader in application delivery networking, today announced that it has entered into a distribution agreement with Promark Technology (www.promarktech.com), a premier U.S.-focused value-added distributor (VAD) and wholly-owned subsidiary of Ingram Micro Inc. Under the terms of the agreement, Promark will offer Array's application delivery networking products and solutions, including load balancing, SSL VPN and WAN optimization, as well as Array's line of next-generation virtualized appliances.

Array Networks' application delivery solutions ensure the availability, performance and security of applications and Web services running in enterprise data centers as well as private and public clouds. Available as dedicated physical appliances, software virtual appliances or on a new line of virtualized hardware appliances, Array's application delivery solutions give customers the flexibility to select deployment models that strike the right balance of performance and agility. In addition, integration with VMware, Microsoft and OpenStack orchestration gives customers the ability to automate application management in modern cloud and virtual environments.

Differing from other load balancing and application delivery solutions that are often excessively costly and complex, Array's application delivery solutions offer flexibility and agility to fit the needs of any network environment without disproportional budget impacts. Whether deployed in support of enterprise applications or cloud-based Web applications and services, Array solutions deliver essential features, performance and reliability without the need for specialized IT resources.

"Promark Technology has the market knowledge and experience required to effectively bring our products and solutions to market," said Rich Siegel, Vice President of Sales and Business Development at Array Networks. "This alliance with Promark Technology is an important strategic addition to our worldwide channel partner infrastructure that will allow us to accelerate the adoption of Array technology by enterprises and services providers and enable current and future VAR partners to maximize their business opportunities."

"Customers and IT solutions providers are looking for choices and flexibility as they embrace the cloud, reap the benefits of mobility and experience rapid data growth in their environments," said Dale Foster, Executive Director and General Manager of Promark Technology. "Our new relationship with Array Networks expands our solution portfolio, delivers more choice to our

channel partners and empowers them to meet the networking and security demands of today's applications and cloud services."

About Array Networks
Array Networks is a global leader in application delivery networking with over 5,000 worldwide customer deployments. Powered by award-winning SpeedCore software, Array solutions are recognized by leading enterprise, service provider and public sector organizations for unmatched performance and total value of ownership. Array is headquartered in Silicon Valley, is backed by over 400 employees worldwide and is a profitable company with strong investors, management and revenue growth. Poised to capitalize on explosive growth in the areas of mobile and cloud computing, analysts and thought leaders including Deloitte, IDC and Frost & Sullivan have recognized Array Networks for its technical innovation, operational excellence and market opportunity.
