Array Networks Makes Virtual SSL VPN Available in AWS Marketplace

Array's virtual secure access gateway solutions run natively on AWS, provide necessary on-demand connections to public cloud from any device, anywhere

Milpitas, CA – February 2, 2016 – Array Networks Inc., a global leader in application delivery networking, announced today the immediate availability of its virtual SSL VPN Secure Access Gateway (vxAG) in Amazon Web Services Marketplace (AWS Marketplace), an online software store that streamlines the procurement process for customers looking to find, buy, and immediately start using software and services that run on AWS.

With increasing mobility, growing adoption of cloud services and a shift in thinking that emphasizes securing data in addition to securing networks and devices, modern enterprises require a new breed of remote and mobile access solutions. The Array virtual vxAG on AWS centralizes control over access to applications, desktops, files, networks and Web sites from a broad range of remote and mobile devices – providing connection, end-point and server-side security for business-critical applications running on AWS while at the same time increasing productivity for employees, partners, customers and other communities of interest.

Because the Array vxAG SSL VPN runs natively on AWS, all that is required for activation is to select and purchase the vxAG within AWS Marketplace and apply a license purchased from Array (BYOL). For businesses that are deploying either all or a significant portion of their application infrastructure on AWS, the ability to securely access infrastructure resources for remote management is becoming increasingly important. Array's vxAG provides a means to cost-effectively implement either primary or redundant remote and mobile access from authorized users to authorized AWS infrastructure from any device, anywhere.

"Businesses look to AWS to support their IT infrastructure requirements; however, moving resources out of the enterprise and onto the cloud creates the need for highly secure and highly robust secure remote and mobile access," said Paul Andersen, director of marketing at Array Networks. "With the vxAG on AWS, we are meeting our customers' evolving cloud requirements and broadening Array's secure access portfolio while continuing to keep an emphasis on securing corporate data and limiting network exposure."

Perpetual, monthly and yearly subscription licenses are available from Array to provide flexibility that is in line with the flexibility of AWS.

About Array Networks
Array Networks is a global leader in application delivery networking with over 5000 worldwide customer deployments. Powered by award-winning SpeedCore™ software, Array solutions are recognized by leading enterprise, service provider and public sector organizations for unmatched performance and total value of ownership. Array is headquartered in Silicon Valley, is backed by over 400 employees worldwide and is a profitable company with strong investors, management and revenue growth. Poised

to capitalize on explosive growth in the areas of mobile and cloud computing, analysts and thought leaders including Deloitte, Red Herring and Frost & Sullivan have recognized Array Networks for its technical innovation, operational excellence and market opportunity.
